Your patients' benefits:

- ▶ Decreased pain, increased mobility and ROM.
- ▶ Increased exercise tolerance to improve biomechanics, strength, mobility cardiovascular health and weight loss.
- ▶ Increased functionality and higher quality of life.
- ▶ Reduce the risk of co-morbidities due to inactivity related to progressive OA.

Athletes Benefit from HipTrac:

Even in the presence of no pathology, HipTrac's long axis traction provides that neurophysiological relaxation around the hip, psoas and lower back and is a great recovery tool after intense training and competition.

"As a PT, I like to try new medical devices before recommending them to my patients. When I injured my hip, I thought what better a time to give the HipTrac a try? I was pleasantly surprised with the ease of using the device and the positive results after just a few sessions! My aggravating hip pain disappeared without the need for further medical intervention! I will gladly recommend the HipTrac to my patients as a way to avoid surgery or invasive hip treatments." Vanessa Milrad, DPT
